

Market Leading Case Management Software

ADVANCED CASE MANAGEMENT

The use of an effective case management system has been proven to deliver up to 40% efficiency savings for your team. The combination of specifically designed user interfaces and the advanced customisation options, ensure that INCASE Intelligence can be easily adapted to suit any type of case, contact, customer or information management environment.

INCASE has been developed over 20 years working closely with our clients in the public and private sectors. INCASE Intelligence is currently used by over 100 organisations across the UK in a wide variety of areas including (but not limited to):-

- Corporate investigations
- Tenancy & social housing fraud
- Financial investigations
- Anti-social behaviour
- Information governance
- NHS investigations

The advanced functionality of INCASE Intelligence means that you can choose the features you need to maximise your outcomes and increase efficiency. In short INCASE Intelligence is a system designed to complement and enhance the way you work and not dictate it.

FLEXIBLE INSTALLATION OPTIONS

With the ever increasing controls placed on software installations INCASE Intelligence can now be installed in a variety of methods to suit your organisations requirements. While many users still prefer to have sensitive investigation data stored within their local network, there is a growing demand for hosted solutions. Using our very own Microsoft Azure platform, INCASE Intelligence can now be rolled out as a web based solution.

POWERFUL INTELLIGENCE DATABASE

INCASE Intelligence builds all cases based on a range of subjects including; Cases, People, Addresses, Organisations, Vehicles and Accounts. The ability to use or hide as many of these subjects as you need means that our solution will fully meet the needs of any user/team.

INCASE Intelligence will also allow multiple links between subjects resulting in more accurate recording of investigations (i.e. Cases can have multiple People, Addresses linked to 1 record, which means reporting is far more accurate).
